DAMIEN GOLDEN

AI GOVERNANCE · CYBERSECURITY GRC · ENTERPRISE RISK · GOVERNANCE ENGINEERING

St. Louis, Missouri | github.com/damiengolden3674 | The Control Layer™ portfolio

PROFESSIONAL PROFILE

Governance and cybersecurity professional with recognized operational leadership experience and independent software-development work. Founder and architect of **The Control Layer™**, a governance architecture designed around human authorization, policy boundaries, least privilege, auditability, and controlled AI execution. Developing Apple-platform applications for cybersecurity and AI governance education.

CORE CAPABILITIES

AI governance & risk management · Cybersecurity GRC · Enterprise risk · NIST AI RMF / CSF concepts · Identity & access governance · Policy-as-code concepts · Audit evidence · Incident response concepts · Python · Linux · Git / GitHub · Xcode · Apple platform development · Operations leadership

PROFESSIONAL EXPERIENCE

SPECTRUM / CHARTER COMMUNICATIONS | *Sales, Technical Support & Supervisory Roles* | 2022–Present

- Served in residential sales, internet repair, and technical repair supervision; supported customer service, quality assurance, coaching, and performance management.
- Recognized as **Top Performing Supervisor (May 2023)** and through multiple top-performing team awards in 2022–2024.

SLIM CHICKENS | *District Manager* | Prior experience

- Led multi-unit operations, staffing, compliance, performance management, and leadership development.

SELECTED GOVERNANCE & SOFTWARE PROJECTS

THE CONTROL LAYER™ — Founder / Architect, Golden Governance LLC

- Designed a governance architecture that separates AI intelligence and technical capability from human authority using risk evaluation, authorization gates, governed execution, and audit evidence.
- Maintains a sanitized public GitHub portfolio with architecture and governance artifacts.

SECURITY+ ACADEMY — Independent Application Development

- Built local Xcode projects for macOS and tvOS and developed cybersecurity education, assessment, and simulation concepts.

AIGP ACADEMY — Independent Application Development

- Built a standalone Xcode application project for AI governance learning, scenario-based instruction, and exam-readiness design.

CONTROL LAYER MOBILE / TV — Apple Application Development

- Created mobile and tvOS Xcode projects; Apple Development and Distribution signing identities are configured locally.

Application projects are in development. App Store release and production readiness are not represented as verified.

EDUCATION & RECOGNITION

Saint Louis University — B.S., Computer Information Systems (Cybersecurity concentration), in progress; Dean's List. M.S. Information Systems & Emerging Technologies graduate pathway.

Honors: National Society of Leadership and Success; Order of the Sword & Shield (2025).

SELECTED CREDENTIALS & TRAINING

DAMIEN GOLDEN

Professional experience and engineering evidence | Continued

Google Cybersecurity · Microsoft Cybersecurity Analyst · Google Cloud Cybersecurity · AWS cloud architecture training · Data analytics and project management training · MedCerts Cyber Security Analyst (CySA+) program completion (*not a CompTIA certification*).

CAREER DIRECTION

Pursuing **AI Governance Director** opportunities, combining operational leadership with applied AI governance, cybersecurity GRC, enterprise risk, and governance engineering.

THE CONTROL LAYER - VERIFIED ENGINEERING ADDITIONS

Authority boundaries. Reconciled human authority and delegated execution rules, retaining human-only privileged actions and explicit scope boundaries.

Device verification. Corrected status reporting to distinguish connectivity, agent enrollment, model availability, and acceptance criteria.

Learning-ingest validation. Added capacity validation, archive-collision handling, and sensitive-metadata checks. Six isolated regression tests passed; live activation and continuous learning remain unverified.

Recovery testing. Verified checksum integrity and an isolated file restore from an existing application backup. This demonstrates the tested file restore, not full-system disaster recovery.

EVIDENCE SCOPE

Engineering evidence recorded October 13, 2026. End-to-end autonomous orchestration, continuous learning, cross-device failover, and complete recovery acceptance remain in progress. No new professional certification or completed degree is claimed.
